Description and Sources

Description

Two phases of archaeological work were carried out at Battle Abbey School:
A watching brief along the west lawn during the excavation of foundation pads for a temporary classroom and a service trench revealed two previously unrecorded stretches of undated cobbled yard surface. An evaluation of three machine-excavated trenches north of the school revealed the exterior face of the west wall of the demolished abbey church, together with mortar screeds interpreted as construction deposits. Elsewhere on site, a number of successive levelling deposits of medieval date were cut by at least three pits filled with demolition rubble, two of probable 14th-century date relating to post-Dissolution sand extraction, and one of later date possibly associated with early 19th-century levelling during the construction of adjacent stables. Later garden soils sealed these rubble deposits, and included part of a Victorian fountain. Finds were sparse but included several disarticulated pieces of human bone and a medieval broad-head arrowhead.

Address

The Walled Garden, Battle Abbey, Butter Cross, High Street, Battle, East Sussex, TN33 0AE

Description and Sources

Description

Three trenches were mechanically excavated within the walled garden. Although no medieval monastic deposits were located, the existing garden wall on the south and east was found to be built on the original foundations of the medieval precinct wall.

Description and Sources

Description

A watching brief was maintained during the excavation of foundations for two new dwellings. Although the site had archaeological potential, no archaeological features of significance were observed although several sherds of medieval pottery were recovered. Part of the site had been heavily disturbed by modern features.

Description and Sources

Description

Three trial trenches were mechanically excavated at one of the proposed sites for a new visitor centre at Battle Abbey. Two of the trenches showed considerable modern truncation but a third contained the robbed out alignment of the precinct wall, a substantial stone built wall, (possibly part of a stone building first discovered in 1997) and two possible medieval floor surfaces.

Description and Sources

Description

A watching brief was undertaken during December 2000 by Luke Barber of Archaeology South-East (University College London Field Archaeology Unit), on behalf of Morrison Construction Ltd / Transco, during the replacement of a gas pipeline across the site of the Battle of Hastings, immediately to the south of Battle Abbey. No easement was stripped of topsoil for the work and the pipetrench itself was only 250-300mm wide which drastically inhibited visibility. Traces of a linear drain were located which appeared to run south from the Reredorter. Although of probable medieval date it had been disturbed by modern land-drains. A further probable medieval drain/ditch and slight evidence of a third was found apparently running south from the Abbey's Cellarers Range. These appeared to have been infilled with demolition material during the Dissolution. Despite a thorough search of all spoil with a metal detector no artefacts relating to the battle were located though this may have been due to the keyhole nature of the groundworks.

Description and Sources

Description

Two areas were surveyed in detail during the course of Time Team investigations at Beauport Park. The first concentrated on an area within the woods thought to contain a Roman building and trackway; the second on the 13th Fairway where scanning indicated numerous strong magnetic anomalies. Survey using resistance, magnetic and magnetic susceptibility measurements in the wooded area failed to find any geophysical evidence for the postulated structure. Excavation confirmed this result. Detailed magnetometer survey on the golf course identified a complex of 'industrial' type responses, only some of which were believed to be associated with construction and landscaping of the fairway. Excavation also supported this interpretation by finding industrial slags and a possible charcoal burning pit.

Description and Sources

Description

In summary, the site appears to comprise a core area to the south and west of the stream confluence, which has evidence for both smelting and ore roasting (Brodrigg and Cleere 1989,241), with the waste dumped in a large slag heap. To the north of the stream is an extensive area which has evidence for iron-working and also some evidence for habitation. The relatively small quantities of slag in this area suggests that the waste was largely removed to the slag heap. This area was not fully delimited except to the west where the edge appears to have been demarcated by an earthwork bank. No clear evidence for any settlement structures was discovered but the general impression gained is that there was no clear differentiation between the industrial and habitation areas of the site. A number of large pits to the north of the site may indicate an area of ore procurement. There does not appear to have been any activity to the east of the stream.

Description and Sources

Description

An archaeological watching brief was carried out on the 16th of August 2004 during the installation of a tree-root barrier adjacent to the hockey courts at Battle Abbey School, Battle, East Sussex. This revealed two sections of wall footings that were roughly aligned north to south. These could indicate the presence of buildings or boundary walls. However the limited insight into these remains during this investigation was not sufficient to firmly conclude any identification.

Description and Sources

Description

watching brief maintained during groundworks associated with the construction of an extension. Most of the area had been disturbed by 19-20th century foundations etc, but a large area of cinder and iron slag was recorded in the centre of the site. Although no dating material was recovered this feature is likely to be of Romano-British date.

Description and Sources

Description

An archaeological watching brief was maintained on groundworks associated with the construction of a conservatory at 78 High Street, Battle. Although the development site lies within a designated 'archaeologically sensitive area' encompassing Battle Abbey, no medieval features, deposits or artefacts were revealed as a result of the project. Indeed, a sandstone – lined well of relatively recent origin comprised the only discovery of significance made during the fieldwork.

Description and Sources

Description

An archaeological evaluation was conducted to the rear of Buckleys Yesterdays World, 89-90 High Street, Battle, East Sussex (Planning Reference: RR/2005/2566/P). This work was carried out on 20th March 2006. Two trial trenches were excavated to a cumulative length of 10m. Trench 2 revealed the probable remains of a 19th Century wall. This wall was above a made ground deposit dating to the post medieval period.

Description and Sources

Description

An archaeological watching brief was carried out during the excavation of a number of trial trenches adjacent to the precinct wall at Battle Abbey to assess the archaeological impact of a proposed Zebra crossing at Upper Lake, Battle. The watching brief involved the observation of two hand excavated trial trenches across the footpath adjacent to the Abbey precinct wall. It established that there had been substantial disturbance immediately below the current footpath as a result of the laying of previous footpaths. Below this was a relatively undisturbed layer containing artefacts dating from the 16th to mid 18th centuries.

Description and Sources

Description

An archaeological watching brief was maintained during the construction of a new visitor centre and public toilets in the grounds of Battle Abbey (Planning Reference: RR/2005/1541/C1), adjacent to the gate house (TQ 7480 1570). A total of 37 separate site visits were made by supervisory staff from Archaeology South-East. The ground reduction comprised of an area formerly occupied by temporary buildings, public toilets and a World War II Canadian Dugout. The made ground/overburden on this area reached depths of up to 2m. These made ground deposits were nearly all dated to the post-medieval period. However, deposit [124], noted in section directly above the natural clay, contained only 12th century tile.

The outer precinct wall of the Abbey and the remains of a possible buttress were located in an area of ground reduction during the construction of a new pathway. These were well preserved and constructed of sandstone blocks. In the area formerly occupied by pre-fabricated and temporary structures a gully dated to the late medieval/ early post-medieval period, was seen cutting into the natural geology beneath modern made ground deposits. Two possible medieval/early post-medieval walls were seen in a service trench excavated along Park Lane (Trench E). Of particular interest was a well recorded during ground reduction at the northern edge of the site boundary, next to Park Lane.

This well was structured with sandstone bricks and was probably constructed during the 15th or 16th century AD.

Description and Sources

Description

An archaeological watching brief was maintained over a period of three days during ground-work associated with the construction of an all weather riding surface (ménage), in connection with an already up and running agricultural/ equestrian enterprise. No archaeological finds or features were observed below the topsoil in the primary trench and drainage trenches.

Description and Sources

Description

In April 2003, Archaeology South-East excavated a small garden plot behind the Pilgrim's Rest, a medieval building within the historic core of Battle, East Sussex. Much of the trench was obscured by a large rubble dump of post medieval date. However, two small areas of surviving archaeological deposits were identified at the northern and southern ends of the trenches. Features comprised a series of boundary ditches and pits ranging in date from the 12th-19th-centuries. The features were characteristic of small medieval urban plots. Artefactual evidence was limited but included continental imports indicative of the high status of the site.

Description and Sources

Description

This report has been compiled for the Forestry Commission before felling operations in 2009.

A review of existing archaeological, documentary and historical sources within the wider area suggest that Battle Great Wood may have existed as Bathurst Wood prior to the Norman Conquest in 1066.

The surveyed features of numerous sunken trackways, woodbanks, boundary banks, laid hedges and pollarded trees are the physical remains of a wood that has been managed and used over a long period of time. A number of features were found that were not associated with usual woodland activities and may point to formal or informal military activity within the wood in various locations.

Description and Sources

Description

The initial version of this report was based upon inspection of the fabric as visible on 7th August 1997 and was required to assist the local authority in making a decision as to whether to grant Listed Building Consent for demolition. Consent to demolish was granted on 3rd October 1997. One of the conditions attached to this consent was that 'While the demolition works are being carried out in pursuit of this consent, access shall be given to the site in order to make an archaeological record of those parts of the structure previously hidden by later alterations. . . . ' This revised version of the original report incorporates details of the previously hidden fabric revealed during the demolition. The additional recording was carried out between 23rd and 27th January 1998 and, in addition to enhancing the earlier record, showed the earliest phases in the building's development to have been more complex than previously thought. As a result, it was necessary to reinterpret the medieval work, introducing an additional phase of modification and extension.

Description and Sources

Description

In 1997 Archaeology South-East carried out a major excavation in the centre of Battle, on the site of the medieval market place. An earlier evaluation in 1990 revealed the existence of stratified medieval deposits on the site. The 1997 work was hampered by extensive modern disturbance relating to the recent industrial use of the site, but did reveal an interesting sequence of features relating to the medieval and early post-medieval use of the site.

Fragmentary remains of a stone building identified from documentary sources as being a former market hall or courthouse were excavated, together with a major boundary ditch and a series of rubbish pits. Two large ponds were also located. Artefacts included quantities of medieval and early post-medieval pottery, which, although not forming major assemblages, nevertheless cast light on the life of the town.

Description and Sources

Description

A watching brief at Yew Tree Cottage, Netherfield Road, Battle, East Sussex was originally carried out by the Archaeology Team at ESCC, and then continued by CBAS Ltd. During the watching brief the foundations to an earlier building or to an earlier and now demolished structure on the eastern end of the current house were found. The building associated with these foundations appears on the 1st Edition OS map of 1874 but on none of the later editions. Only a small number of artefacts were recovered from the site, but this could be due to the small area that was excavated. All of the artefacts dated to the late 19th to early 20th century, and comprised pottery and ceramic building material.

Description and Sources

Description

A desk based assessment was carried out by Archaeology South East at the linear tract of land lying between the Darwell Reservoir to the northwest, and Beauport Park, to the north of Hastings. It has been identified as a possible route for a new water pipeline supplying the Hastings conurbation. Two proposed pipeline options have been proposed and both are given due consideration in this Desk Based Assessment. The study area formed a two kilometre wide corridor of landscape incorporating both routes, and was found to contain seven designated Archaeologically Sensitive Areas, two Scheduled Monuments and several tracts of Ancient Woodland. Proposed Pipeline 2 impacts upon fewer of these archaeologically designated areas, and monuments, but traverses a larger extent of a fossilised Medieval rural landscape. This mixed arable and pasture farming economy may potentially conceal unidentified prehistoric sites. A walkover survey of both routes was carried out as part of this report. In conclusion, utilising the existing course of the pipeline would seem likely to have the least impact on surviving archaeological deposits.

Description and Sources

Description

C. G. Archaeology was commissioned to maintain an archaeological watching brief on groundworks associated with the construction of a new detached function suite at Bannatyne Spa Hotel, Beauport Park, Battle Road, Hastings, East Sussex.

The development lies within an area of known Romano-British iron processing and associated settlement activity. Furthermore, the current hotel (built between the years 1923 – 1926) was erected on the site of an earlier Georgian house dating to 1763 – 1766. However, no in-situ structures, cut features, deposits, artefacts or ecofacts of archaeological note were discovered during the fieldwork. The project also failed to expose a single context of palaeoenvironmental significance.

Description and Sources

Description

An archaeological watching brief was maintained on groundworks associated with the construction of two new dwellings on land to the rear of 85 – 86 High Street, Battle, East Sussex. Two sherds of pottery recovered from the site subsoil and assigned to the period c.1100 – 1225 comprise the earliest discoveries made during the fieldwork. Three features indicative of 13th – mid 14th century activity were also revealed. One of these cuts yielded a significant quantity of charcoal, two pieces of iron tap slag and had clearly been subject to intense heat. Although no associated lining or extant superstructure was found, this feature is tentatively interpreted as the surviving base of a small iron smelting furnace intended to supply local domestic needs. The two other cuts of confirmed 13th – mid 14th century date were a pit containing pottery indicative of domestic rubbish disposal and a probable ditch / gully of uncertain function. Broadly contemporaneous pottery was also gleaned from the excavated topsoil and subsoil.

Three pot sherds, two peg tiles and four clay tobacco pipe stem segments comprise the only evidence for activity during the period c.1550 – 1750.

Nevertheless, two brick / tile drains of mid 18th – 19th century date were exposed by the monitored groundworks. Two probable circular – shaped pits and a rectangular – shaped cut of uncertain function have also been assigned to the period c.1750 – 1860.

Four undated negative features were revealed across the site. These comprise a large circular – shaped cut of uncertain function (but possibly a well) two pits and a probable ditch / gully.

A modest, spatially – confined collection of mixed / disarticulated human bone was located within the site topsoil at a depth below ground level of just c.0.40m. Specialist examination of these remains has confirmed the presence of at least two adults and an infant aged between 3 – 5 years. However, it should be noted that the skeletons of the represented individuals are far from complete. The mixed / fragmentary nature of the bones, their shallow location and the absence of any obvious grave cut or funerary structure suggests that the assemblage had at some point in time been re-deposited / re-interred within the topsoil and as such does not comprise a 'genuine' in-situ burial / the original burial site. Even so, any objective interpretation of the deposit's character and of course age must await the results of intended radiocarbon dating.

Description and Sources

Description

An archaeological watching brief was maintained on the removal of rubble from the rood loft stairway and the excavation of three geotechnical test-pits at St. Mary the Virgin Church, Upper Lake, Battle. The rubble located within the stairwell included a high proportion of worked sandstone blocks, some of which possessed painted surfaces and / or the remnants of painted plaster. The removal of these stones revealed the sandstone steps that once led to the rood loft (loft no longer extant). Only the lowest two steps are complete.

The exposed rood loft stairwell (constructed of sandstone blocks set in lime mortar) comprises a c.2m. x 1m. sized chamber with a somewhat arcing / semi-circular west wall and barrel – vaulted roof rising to a point. The stairway curves round to the east, meeting the south wall of the chamber c.2.4m. above the floor. A blocked up – doorway to the rood loft was found in the wall at the top of the steps. Evidence for a possible second entrance into the stairwell from outside the church was also recorded.

The rood loft stairway is believed to date from the mid 15th century. It is suggested that the rood loft was demolished and the stairway / upper and lower doorways blocked – off as part of William Butterfield's programme of 'restoration' carried – out in 1869. At least some of the worked / decorated sandstone pieces used to backfill the stairway at this time may have once formed part of the rood loft itself.

The foundations of the mid 15th century north aisle wall, protruding rood loft stairwell and modern vestry were observed during the excavation within the cemetery of three test-pits. A possible sandstone and brick surface of uncertain form, function and date was also exposed.

Description and Sources

Description

An archaeological watching brief was carried out at Adanac, Whatlington Road, Battle, East Sussex ahead of a proposed exstention. Topsoil was removed under archaeological supervision and was about 15-18cm thick. It overlaid subsoil, a brown yellow sandy silt with few inclusions and about 5-6cm thick. The natural substrate was exposed at about 20-22cm and was a firm brown yellow sandy clay with no inclusions. No archaeology was revealed.

Description and Sources

Description

A partial woodland walkover survey was carried out in Forewood, Crowhurst in January and February 2014 by Vivienne Blandford. The survey concentrated around a known Bloomery site, which has been dated to the late Iron Age or early Roman period, and revealed the extent of the site.

An Environmental Agency Lidar image revealed an 'L' shaped wide area of mine pit type quarrying, sunken tracks and wood boundaries, and the walkover survey revealed the extent of the robbed out slag, and a horseshoe shaped quarry, which may have been the original source of iron ore in the early period of iron making.

Documentary evidence from later periods makes it clear that Forewood was being used as a source of iron ore and charcoal, with hollow ways giving a direct link out of the wood and towards the iron works in Crowhurst, which were operating in the latter 16th through to the second half of the 17th century.

Six saw-pits were found close to the tracks and oral evidence suggested that the wood was being actively managed up to the second half of the 20th century.

Description and Sources

Description

(NGR TQ 75106 15862) (Site Code BDRP. Directors Stewart Angell & Peter Hibbs). Following the discovery of documentary evidence of a round pillbox (WW2) sited within the grounds of Battle Deanery, permission was granted by the owner for Sussex Military History Society (hereafter SMHS) to investigate. Excavation was undertaken and findings include the remains of brickwork, concrete footing, concrete floor (not reinforced) and doorway. Remarkably the brickwork below the current ground level was found to still have camouflage paint in place. Permission has also been given to survey a line of over 50 concrete tank traps (SMHS).

Description and Sources

Description

The application site has been shown to have a low to moderate potential for earlier prehistoric activity, dating specifically to the Later Mesolithic period and suggesting sporadic occupation in this area. There is also a low to moderate potential for later prehistoric and Roman activity, relating in particular to evidence for iron ore mining / working and a routeway running through this area. There is also a moderate potential for medieval activity, related to the position of the application site on the periphery of the probable battlefield of the Battle of Hastings in 1066. There is also a moderate to high potential for medieval and post-medieval agricultural activities across the study area. This assessment suggests a low potential for all other periods.

Description and Sources

Description

Archaeology South-East (ASE), the contracting division of the Centre for Applied Archaeology (CAA), Institute of Archaeology (IoA), University College London (UCL) was commissioned to carry out an archaeological trial trench evaluation for a proposed redevelopment at 43 Lower Lake, Battle, East Sussex. (NGR 575179 115689) Three archaeological evaluation trenches were excavated.

The site was located in an area of land sloping from north to south. The Ashdown Sandstone Formation was encountered at 71.17m in the north-east part of the site, and at 69.35m in the south-west part of the site. An undated oval shaped pit was encountered in Trench 2, where it was sealed by a layer of colluvium. A large probable former cess pit, subsequently reused as a rubbish pit during the 17th-18th century was identified in Trench 3. No Medieval deposits were revealed relating to the nearby Abbey or the site of the Battle of Hastings, although a small residual assemblage of medieval pottery and tile suggests some activity of this date in the vicinity of the site.

Description and Sources

Description

An archaeological watching brief was maintained during the manual excavation of a test-hole and trench associated with the installation of a replacement gas pipe at Battle Abbey School, Battle, East Sussex. The trench closely followed the alignment of the previous gas pipe trench and hence no significant archaeological deposits were encountered. A small assemblage of artefacts which had become incorporated into the backfill of this trench was recovered.

Description and Sources

Description

The historic building survey at Hemingfold Oast house produced evidence for four phases of development of the building. The original oast house was probably constructed during the mid 19th century. The second phase of development was that the oast house was converted into two workers cottages in circa 1880. This involved the removal of the southern part of the wall of the kiln to incorporate it into the northern cottage. Sometime before 1873 the small extension to the south-east of the kiln was constructed. The final phase was the conversion of the building into a single dwelling and the construction of a circular building to the south-east of the original building and the associated connecting range on the eastern side. The conversion of the oast house to two workers cottages removed most of the original internal fabric of building appertaining to its use as an oast house

Description and Sources

Description

A watching brief was maintained on the shallow ground reduction for a new footpath to the north-east of the main entrance to Battle Abbey. There was an existing Tarmac path to the east of the buttress, this was removed and a thin strip of ground was reduced to the south of the existing path, with the length of the footpath on the western side of the buttress being reduced by 300mm. No archaeological features were noted in either of the reductions. However, at the eastern end of the western reduction a concrete plinth or pad was revealed, and at the northern end of this reduction a cut was noted. Interpretation of both these features was difficult due to the shallow depth and narrow width of the reduction for the footpath. A very mixed assemblage of artefacts was recovered, which all could be dated to the late 19th -20th century.

Description and Sources

Description

A geophysical survey was undertaken at Lower Telham Farm, Battle in October 2016. The survey revealed a number of features of indeterminate function and age across the site, alongside a number of modern metallic disturbances. While it seems likely that none of these features are archaeological it is impossible to say for certain from the findings of this survey alone. There was no obvious evidence for iron working or other industrial activity at the site.

Description and Sources

Description

An archaeological watching brief was maintained on groundworks associated with the construction of a single – storey extension to St. Mary the Virgin Church, Upper Lake, Battle. Before the start of building work, a complete written, drawn and photographic record of a chest tomb, ledger and 10 upstanding headstones located within the footprint of the proposed extension was produced. These memorials were then removed from the site for the duration of the groundworks, before being re-positioned. Four brick vaults and 14 other probable grave cuts were revealed by the groundworks undertaken at the church. On investigation it was confirmed that two of the exposed vaults each contained at least one adult human skeleton lying in a supine position with skull towards the north-west / west (skeletal remains not subject to specialist osteological analysis). Although the name, sex, age at death and pathology of these two individuals remains a matter of conjecture, bricks sampled from the roofs of the containing structures have been dated to the mid 18th – 19th century. The two other recorded vaults were not subject to archaeological excavation. The 14 probable grave cuts exposed during the watching brief were preserved in-situ (i.e. not subject to further disturbance by either archaeological investigation or building work). The name, sex, age at death, pathology and antiquity of the individuals presumably buried within these features was thus not ascertained. Nonetheless, it is clear that the documented cuts represent more than one period of probable burial at the site. Indeed, the discovery of human skeletal material beneath one of the church's north aisle buttresses suggests the presence of at least one interment (either in-situ or displaced) that pre - dates the construction of the external north aisle wall in c.1440 – 1450 (bones observed in section only and not subject to archaeological excavation).

The other discoveries of archaeological note made during the watching brief comprise the probable sandstone foundation / base for the north wall of the mid 14th century Lady Chapel and part of another likely sandstone wall foundation of uncertain date located to the southwest of the church. The modest assemblage of pottery, brick, tile, clay pipe, metalwork, slag and slate gleaned from the project spans the period from the 13th - early 14th century to late 19th century.

Description and Sources

Description

The clearance under archaeological supervision of a blocked – up stairwell and two doorways has enabled the investigation of structural features associated with a rood once located within St. Mary the Virgin Church, Upper Lake, Battle.

No evidence was recorded to refute the theory that the unblocked rood stairwell and doorways described in this report were constructed in the mid 15th century. Examined cartographic and documentary sources suggest that the now open upper doorway 'originally' led into a contemporaneous (but long – gone) passageway / gallery that was supported by an arch and spanned the full width of the north aisle at its easternmost end. Indeed, a modest area of (undated) brickwork located in the wall beneath the upper doorway may well mark the spot from where the arch once sprang.

A third still blocked – up doorway discernible in the north arcade of the church is perhaps most likely to have provided access from the aforementioned passageway / gallery to a rood, rood loft and possible screen once sited in front of the chancel.

A description of the church in 1835 asserts that the rood passageway / gallery located at the eastern end of the north aisle was (only?) accessible from the churchyard. In fact, an area of rather crude repair / 'in-filling' perhaps indicative of a former entrance into / from the graveyard can still be seen at the eastern end of the stairwell's north wall. The antiquity of this possible external doorway remains a matter of conjecture. However, it would appear to have been blocked – up by 1845.

Any rood, rood loft or screen once placed in front of the chancel has long since been removed / demolished. No contemporaneous records of such an act of apparent iconoclasm have been seen by C. G. Archaeology.

The examined documentary evidence suggests that the rood passageway / gallery and supporting arch were still intact in 1852. Yet by 1899 these features had seemingly been destroyed. An 1866 report by William Butterfield on the condition of the church makes no mention of the rood passageway / gallery. Nonetheless, it is clear that this structure and the supporting arch are most likely to have been demolished as part of his subsequent programme of 'restoration' carried – out in 1869.

Logic would suggest that at least some of the worked (and perhaps painted) stones used to backfill the rood

stairwell once formed part of the demolished rood passageway / gallery and supporting arch. The brick, peg tile, clay tobacco pipe stem and iron key discovered during the clearance of the stairwell certainly support the theory that this particular feature was 'filled – in' during the 1869 'restoration' project.

The upper rood doorway had been 'filled – in' with heavily mortared stone and mid 18th – 19th century and 19th – 20th century type bricks. The stones removed from the door appear to include worked / architectural pieces derived from structures other than the demolished rood passageway / gallery and supporting arch (e.g. an Early English water – holding base spot – dated to the 13th century). Even so, no conclusive evidence has as yet been found to indicate that this entrance was not blocked – off in 1869.

The lower rood doorway was unfortunately unblocked without an archaeologist being present. However, a retained Caen stone, worked and carved with possible crusader crosses, would appear to confirm that the removed 'fill' also included architectural pieces derived from structures other than the demolished rood passageway / gallery and supporting arch. The doorway was described as being blocked – up in 1899.

It is recommended that the worked and / or painted / carved stone recovered from the cleared rood stairwell and doorways should be subject to precise quantification, specialist examination and documentation. A final report on the project should then be prepared for submission to 'Sussex Archaeological Collections'.

Description and Sources

Description

A fluxgate gradiometer survey was undertaken on land at Battle in East Sussex.

The survey has recorded only limited evidence of potential archaeological remains, in the form of a possible pit and buried ditch.

For the most part, linear trends reflect traces of ridge and furrow cultivation and probable recently removed field boundaries.

The survey registered strong variation associated with a buried service, electricity poles and probable miscellaneous modern ferrous-rich materials/features.

Description and Sources

Description

In January 2015, Arrow Geophysics Ltd carried out a high-resolution ground penetrating radar survey in Battle, East Sussex across a proposed extension to an existing cemetery. This located features variously interpreted as a possible wall footing with associated rubble spread, a shallow excavation, two linear features and several buried objects.

No burials have been interpreted from the survey dataset.

Description and Sources

Description

Archaeology South-East was commissioned to undertake an archaeological evaluation on land adjacent to Undermill, Caldbec Hill, Battle, East Sussex (574722 116574). A single trench measuring 7.5m by 1.5m was excavated on 22nd December 2015. No archaeological deposits or features were encountered, and no artefacts were recovered from the overburden. The absence of any topsoil or subsoil deposits shows that the site had been stripped during previous earthmoving exercises at the site.

Description and Sources

Description

An archaeological watching brief was maintained during excavations for a new house, and a new driveway to the existing house, at Bay Tree Cottage, Whatlington Road, Battle. These excavations revealed no archaeological features. Made ground deposits were recorded, the uppermost of which was probably deposited when a 19th century or earlier building on Site, potentially built as part of a Napoleonic barracks, was demolished in the late 19th century / early 20th century. No remains of this building were found, as the new house footings were excavated to the north of it, and excavations for the new driveway only exposed what was interpreted on Site as a very disturbed natural deposit. A deposit containing slag was recorded within the northwest corner of the Site. Whilst this may have been a made ground overlying the natural deposit, it may alternatively have been the hardcore of Whatlington Road, or some other such area of hardstanding, perhaps laid during construction of the barracks, but with the surface since removed. The only datable finds recovered from this deposit comprised three small pieces of peg tile dating to the 17th-18th century.

Description and Sources

Description

Fieldwork was undertaken on the site at Battle over two days 8-9/5/2011 during which seven test pits were dug through the topsoil and into subsoil. A collection of 25 artefacts from test-pitting and metal-detector survey were evaluated by S Ashby (see table below). Of these items, there were three pieces of lead/lead alloy, one piece of cu-alloy, one silver coin (post medieval), and twenty iron objects. None of the artefacts could be said to be diagnostic of the 11th century, of military activity.

The number of modern finds recovered and noted in detecting was exceptional. Most of these artefacts appear to derive from the use of the site for public access and especially for re-enactments and - most problematic - the annual bonfire parties which seemingly add vast numbers of ferrous nails and other junk. While most of these finds will not be confused with any battle archaeology, the vast numbers of artefacts being added to the site makes metal detecting survey exceptionally difficult and time consuming.

Description and Sources

Description

The report looks at the development of the timber tower and spire in a defined area in Kent and Sussex. The various forms of timber tower including detached, attached, belfries within the nave and bellcotes on the roof, are examined in relation to both published examples from elsewhere and in relation to the study area. Secondly, in less detail, roofs over towers are examined in relation to early survival and replacement and finally stone battlemented towers without timber pitched roofs are listed and discussed.

The thesis to be explored is that church spires in the area reflect a variety of traditions found over a much wider area, were probably built by specialist or by local craftsman sent to other spires and possibly linked to military tower building, that the spires were subject to conservative adaptation and repair until more radical Victorian rebuilding and are still subject to disrepair and threats.

Darwell Reservoir to Hastings Pipeline, East Sussex

Description and Sources

Description

A detailed fluxgate gradiometer magnetic survey was carried out over a total area of 21.55 ha of agricultural land between the Darwell Reservoir and Hastings, East Sussex along a proposed water pipeline route between the two locations. The survey area was limited to the pipeline route as this is the area affected by development. The Fluxgate Gradiometer magnetic survey has picked up magnetic anomalies related to modern disturbance and possible archaeological origin. Positive linear anomalies may indicate the presence of features cut into the ground such as ditches, whilst negative linear anomalies may represent former earthworks or banks. Discrete positive anomalies may represent possible pits, whilst dipolar anomalies may represent ferrous objects. The data seems to suggest possible archaeological activity throughout the length of the pipeline route with localised concentrations.

District ROTHER, EAST SUSSEX

Address

Battle Abbey, Battle, East Sussex

Description and Sources

Description

The plan has been prepared to inform the conservation and management of the buildings, park and battlefield at the English Heritage property of Battle Abbey.

The plan outlined that English Heritage should comply with the legal and procedural requirements for scheduled monuments, listed buildings and conservation areas, together with best practice in the management and presentation of the non-statutory registered battlefield, archaeological notification areas, and registered historic park. The wider setting of the site within the High Weald Area of Outstanding Natural Beauty and the policies in the High Weald AONB Management Plan 2014-2019 should always be considered in any actions. Best professional practice and English Heritage's own advisory documents should be followed at all times. There are three particular subject areas that should be at the forefront of this approach within the plan period archaeological investigation and recording, the presentation of the building and the landscape and the wider setting of the property.

Description and Sources

Description

Battle Abbey has been the subject of numerous archaeological and antiquarian investigations over the past two centuries.

Since the Department of the Environment's excavations in the late 1970s, archaeology at Battle Abbey has been development-led rather than research-led, with the apparent exception of the unpublished gatehouse excavations. Although this work has been often small-scale in nature and ad-hoc in its coverage, it is valuable in giving thorough treatment to the walled garden and exploring aspects of the infirmary, outer court, precinct wall and the west front of the church.

Two main research questions have been identified for the site:

- The church nave. Although the basic plan of the church is understood, excavation would considerably enhance our understanding of the abbey's most important building as well as to give coherency to what for visitors should be a focal part of the site. Much of the eastern part of the nave, the crossing and the transepts lie outside of the school grounds, and would be immediately accessible.
- The battlefield. No objects which can be related to the events of October 1066 have ever been discovered. The survival, location and nature of any battlefield archaeology needs to be addressed so as to safeguard against contamination and damage from modern battle re-enactment events. Identification of this material within the precinct would also re-focus our perceptions of where the battle took-place.

Description and Sources

Description

This plan is the third volume of the Battle Abbey Conservation Management Plan and is an action plan for the grounds, it covers the period 2015-2025. The anthill grassland is concentrated in North Park and Central Grassland and this should be the focus of their management, so that smaller areas in other parts of the site can be removed if there are overriding reasons for doing so. The Battlefield Walk should remain much as it is subject to any changes based on new interpretation of the battle. There is great potential for an outer park walk that would link to it. Consideration should be given to improving the area shown on Figure 12 so that it is the main area for events parking. Access across the area leading from this to the events space can be improved by scrub removal, the construction of a new bridge and drainage improvements. Full archaeological investigation of the events space would allow reinstatement with improved drainage and soil structure. The main access points could be reinforced and site security could be improved in the southwest corner with the agreement of the adjacent landowner.

Description and Sources

Description

An archaeological evaluation was carried out at Lillybank Farm, Battle, East Sussex. The work was implemented in order to comply with a condition on an approved planning application. Fieldwork was carried out by L - P : Archaeology. This report has been prepared by Cornelius Barton of L - P : Archaeology for Archaeology Collective, on behalf of Millwood Designer Homes Ltd.

The objectives of the works were to determine whether any archaeological remains were present within the footprint of the proposed development, and to record any such remains present.

No archaeological remains were found during the evaluation. It is recommended that no further fieldwork is required to discharge the condition.

Description and Sources

Description

In 2016 Archaeology Services Lewes (ASL), ASL was commissioned to conduct a watching brief on land to the rear of 43 High Street, Battle. A series of cut features were excavated, including pits and post holes as well as an L-shaped brick built feature. A complete pig was excavated next to a flat metalled surface, which may represent a back yard piggery. Artefacts were large in quantity with a wide range of dates providing a mixed picture of activity from the 13th century to the present day. It is clear that animal disturbance had mixed up the artefacts and later 19th century intrusion included the digging of small pits. Three larger postholes are likely to have formed a shelter over the brick feature which may have been a feeding trough.

Description and Sources

Description

Analysis was undertaken on timbers from the Gatehouse, the Dorter, and the Reredorter resulting in the construction of two site sequences. Site sequence BTLASQ01 contains three samples, two from the Reredorter and one from the Dorter, and spans the period AD 1310–1437. The Reredorter timbers are both likely to have been felled in AD 1416, whilst the beam from the Dorter has a terminus post quem for felling of AD 1452. The second site sequence, containing two Gatehouse samples, is undated, as are the remaining individual samples.

Description and Sources

Description

Archaeology South-East was commissioned by Asprey Homes to conduct a magnetometer survey on a site totalling approximately 1 hectare of land at Darvel Down, Netherfield, East Sussex. The work was undertaken on the 2nd of February 2017. Evidence for possible archaeological features was represented by strong and moderate positive anomalies (coloured green on Figure 5). Though they could have an archaeological origin, they may equally be the result of the natural geology.

Description and Sources

Description

A metal detector survey was carried out by members of the Eastbourne and District Metal Detecting Club (EDMDC) at Corriemulzie, Netherfield, TQ71551881 (centre). The survey was requested by Greg Chuter, East Sussex County Archaeologist, following a Countryside Stewardship land management agreement. Finds were retained by the finders. The earliest find was a 13th century silver penny (probably Edward 1st), with a second silver penny from the reign of Elizabeth 1st, and a couple of finds from the 17th century; all probably casual losses. More significant activity, begins in the early 19th century, with an increase of losses during the latter Victorian period. Evidence of WW2 activity, potentially British and Canadian engineer units, is seen from munitions, cap badge and button finds.

Description and Sources

Description

This archaeological and heritage assessment has been prepared by the Environmental Dimension Partnership Ltd (EDP), on behalf of Catesby Estates Limited, to inform planning proposals for a residential development on land off Tollgates, Battle, East Sussex. A geophysical survey was undertaken following consultation with the archaeological advisor to the council. This identified a number of linear features possibly representing a former field system or features of more recent origin. There is no evidence for the presence of any prehistoric or other settlement activity. Based on this information, there is no reason to believe or expect that the site will contain archaeology of such significance that it would require preservation in situ and prejudice its delivery for the form of development proposed. Any below-ground deposits that are present are likely to be poorly preserved due to modern agricultural activity, thereby reducing their significance.

Description

This Archaeological Desk Based Assessment undertaken by Border Archaeology Ltd regarding land to the rear of Nos. 56-58 High Street Battle East Sussex has reached the following conclusions regarding the potential of the archaeological resource within the study area. Based on the results of this Assessment, the potential for encountering evidence of prehistoric and Roman activity has been assessed as Low to Moderate. However, there is High potential for identifying archaeological features and deposits of medieval date and Moderate to High potential for encountering features and structural remains of post-medieval date.

Description and Sources

Description

A desk based assessment was produced for Land west of Glengorse to support a planning application for a proposed sports facility. The study established a low to moderate potential for archaeological remains dated to the 19th century and modern periods. A low potential was also assigned to the Medieval and post-medieval periods. No archaeological evidence dating to the prehistoric, Romano-British and Anglo-Saxon periods have been found within the stud area except for a possible prehistoric or Romano-British trackway running through the study area. The lack of evidence may be due to limited archaeological investigations in the search area.

Description and Sources

Description

A detailed gradiometer survey was conducted over land west of Glengorse, Battle, East Sussex (centred on NGR 575663 115071). The project was commissioned by ATP Architecture on behalf of Battle Abbey School, with the aim of establishing the presence, or otherwise, and nature of detectable archaeological features in support of a planning application for the development of the site as a new sports hall and associated parking facilities. The detailed gradiometer survey has not identified any anomalies that can confidently be interpreted as being of an archaeological origin. The clearest anomalies of interest are primarily pit- and ditch-like features identified in the centre of the site. Potentially the ditch relates to a feature of the parkland when the site formed part of Quarry Hill Park. However, it is equally possible that both the pit- and ditch-like features are natural in origin. Without further investigation of these features, it is impossible to determine this with any confidence. Further possible archaeological features, such as a series of small, discrete pits, have been identified in the south and west of the site. However, it is unclear whether they are archaeological in origin.

Description and Sources

Description

The archaeological evaluation at Darvel Down, Netherfield successfully investigated those areas which will be most affected by the development of the site. No archaeological finds or features were recorded, and the anomalies highlighted in a prior geophysical survey all appeared to be geological in origin. It appears that the northeastern part of the site was significantly disturbed in the past, as made ground and redeposited natural were recorded immediately above the natural geology, which had clearly been truncated. The site is considered to have no archaeological potential.

Description and Sources

Description

An archaeological watching brief was carried out at 4 Hastings Road, Battle, East Sussex to monitor ground reductions and excavation of footings trenches for an extension to the existing house. No archaeological features or deposits were recorded, and a small finds assemblage, dated to the 19th century, is likely to be associated with the existing building, and with the 18th century cottages to the east.

Address

Beech Estate, North Trade Road, Battle, East Sussex

Description and Sources

Description

The archaeological evaluation at Beech Estate successfully investigated those parts of the site which will be most affected by the proposed development, excluding the extreme east and south-eastern parts of the site. Few archaeological investigations had taken place around the site and very little was known about the area archaeologically. Despite this, archaeological features were encountered in nine of the ten trenches excavated. Most of the features identified were linear, although three shallow spreads were also recorded in the northern part of the site (in trenches 5 and 9). Most of the linear features in the western part of the site remained undated but the numerous features in Trench 10 suggest there may have been a concentration of activity nearby. Two features in this trench may date from the Roman period, and further pottery from this period appeared as residual material in later features. Five linear features in the eastern half of the site (Trenches 8 and 10) appear to date from the Medieval period.

Description and Sources

Description

A Ground Penetrating Radar (GPR) survey was conducted over approximately 100m² at Lake House, Battle, East Sussex using a GSSI Dual Frequency Radar system. The objective of the GPR survey was to search for evidence of mass graves as the is in the proximity of the Battle of Hastings. An orthogonal grid of radar profiles was completed over the survey area spaced at intervals of 0.5 X 0.5 metres, where access allowed. The survey data was interpreted as individual radar profiles and time slices, with the results presented as plan interpretations. There was no clear evidence of any anomalies associated with mass graves on the site. A number of possible structures were identified during the ground penetrating radar survey.

Description and Sources

Description

An archaeological field evaluation involving the excavation of nineteen trial trenches was carried out by Development Archaeology Services Ltd (DAS) on and between the 20th-29th of January 2019, in advance of a proposed new residential development on land at Tollgates, Battle, East Sussex.

This archaeological evaluation did not identify any significant archaeological activity and there were no significant finds.

A single truncated ditch, dated to the late C19th early C20th by three residual finds was recorded on a north-south alignment was recorded within Trenches 13 and 14, and the truncated profile of this ditch was recorded in section. Beyond Trenches 13 and 14, this trench appeared to peter out to both north and south, presumably having been removed by later modern ploughing activity. A series of 19th century early to mid-20th century terracotta land drains were also recorded within a number of the archaeological trial trenches.

Description and Sources

Description

A walkover survey and Heritage Statement of land at Blackfriars, Battle, has established that there is limited archaeological knowledge of the Site. The archaeological potential for most periods is low, and the walkover survey found no archaeological features or artefacts that would indicate that the Site had been exploited in any of these periods, apart from the Mesolithic and Post medieval periods.

Description and Sources

Description

This document relates to proposed development of land directly west of the Community College, at Battle in the parish of Rother, East Sussex (NGR TQ 73376 15809). This report presents the results of a desk-based study of archaeological assets and information within the area of 500m of the boundary of the PDA. A wider 2km search was also made to place the PDA in context with the surrounding landscape.

It is concluded that the overall impact of the proposed development should not present a material constraint to development. Searches of national and county databases, have identified a total 12 heritage assets within the 500km Study Area and 138 assets within the 2km Study Area.

Description and Sources

Description

This report presents the results of an archaeological watching brief carried out by Archaeology South-East at Land Adj. To Hammonds, Caldbec Hill, Battle, TN33 during July 2018 and April 2019. The fieldwork was commissioned by Lucy Whistler in advance of demolition of an existing garage and Richard Gane during construction of a new building.

The garage watching brief was terminated at an early stage when it became apparent that removal of the concrete slab with a toothed bucket, which was necessitated by the presence of steel reinforcing mesh, was not compatible with archaeological observation. It was terminated after partial exposure of the ground surface below the northern end of the slab. Removal of the slab exposed a light reddish brown earth deposit likely to correspond to a modern levelling deposit.

The watching brief associated with groundworks for the construction of the new residential property encountered an intact natural horizon, however, no archaeology was observed. No further reduction below the exposed ground surface was undertaken. There were no archaeological features or finds exposed.

Description and Sources

Description

Observations were made of a subterranean passage beneath the 16th century extension created by Sir Anthony Browne. The passage consists of four sections; A 1.6m passage recorded through the width of the 16th century south wall, B a corridor with staircase and vaulted ceiling, C low vaulted opening dividing into two passages and D brick and stone chamber entered from the eastern arm of opening C. A minor excavation was carried out in opening section A to establish the nature of the floor at this point. Demolition rubble was recorded during the excavation covering both the Monastic and post medieval periods.

Description and Sources

Description

A small scale clearance excavation was carried out at the base of the Precinct wall immediately to the east of South Lodge. The wall at this point stands on a foundation of decaying mortar and a concrete slab was to be inserted at the base to provide support. The area of investigation was widened on the discovery of further masonry projecting west so as to understand the structural sequence of the boundary wall at this point. A former gateway was identified in the wall, pre-dating the construction of the South Lodge. A single clipped silver coin was

Description and Sources

Description

A small excavation was carried out on a small area on the exterior of the western doorway into the north room of the Dorter undercroft. The work was carried out to try to alleviate rainwater puddling through the insertion of a drain in front of the current threshold. Two areas of unknown archaeology were investigated. Within area A a small rubble foundation was observed but insufficient evidence remained to be certain of its nature. The excavation also showed that the chamfer of the southern door jamb does not carry on below the current threshold indicating that the replacement threshold had been correctly located. A dump of burnt material containing a mass of animal bones, possibly fish was recovered beneath a clay layer. Three ashlar block have been carefully laid in a line running north south through the area. A number of undated finds including broken tile and square headed iron nails were recorded. Area B yielded very little except for a rubble filled pit, capped by modern cement.

Description and Sources

Description

A small excavation was carried out in the north west corner of the cloister at Battle Abbey in May 1995. The purpose of the work was to establish whether a doorway had existed in the north wall of the Cloister (South wall of the Norman Church Nave). A false doorway built for ornamental purpose was recorded. A few stones from the nearby rockery garden were removed and one of these proved to be a very worn grinding stone. Evidence for a possible earlier wall within the original north cloister wall was recorded in the form of sandstone blocks.

Description and Sources

Description

As part of a programme of maintenance on the Dorter Building, work was carried out on the sills of the 1st floor windows. These sills are of ironstone and thought to be the work of Sir Harold Brakespear in the 1930's. The sill level of the dormitory windows is around 100cm above floor level. However, in some cases the wall below this level is clearly a replacement. The opportunity has been taken to investigate such a blocking below the sill of the southern most monastic window in the west wall. In the management plan this work has been interpreted as an excavation, but appears to described a historic building watching brief.

Description and Sources

Description

A footpath was laid linking the Abbey School (Abbot's House) with the tennis courts in what was the Outer court of the Abbey. Along the line of this path an electrical duct has been put in again for the tennis court. A substantial wall running north.south approximately at right angles to the Guest Range was recorded within the trench. The wall is 96cm wide and appears to have an internal face on the west side. A further hole was dug to the south of the tennis courts to hold a soak away. This recorded a layer of demolition rubble above a possible mortar layer.

Description and Sources

Description

A watching brief was carried out sometime between October 1998 and January 1999 for the insertion of an electricity cable around the school (Abbot's House) in order to power a series of ground level lights. Along the front of the school from lamps A to the main entrance only top soil and gravel were removed. Between the main entrance and the Guest Range terrace a more mixed deposit of clay, redeposited natural and demolition debris was recorded. To the south of the library block two distinct areas of asphalt were observed. It may be that they cover the foundations of walls pre-dating the library. An unknown linear concrete feature set into natural clay and sealed by redeposited clay was recorded from the northern frater wall along the west side of the cloister.

Description and Sources

Description

A desk based assessment was carried out on land off North Trade Road by CgMs prior to proposed development. Based on current evidence, this assessment has identified that the study site has a low theoretical potential to contain previously undiscovered Prehistoric, Roman and Saxon/Early- Medieval assets. Such evidence, if present, is expected to be limited to unstratified finds of local archaeological significance at best. The study site was located on the fringe of the Medieval and later settlement at Battle and was part of the agricultural hinterland of the Battle Abbey estate. Consequently, any later evidence, if present, is expected to be limited to traces of past agriculture (furrows and former field boundaries) and unstratified finds of limited archaeological interest.

Address

Beauport Park Hotel, Battle Road, Battle

Description and Sources

Description

An archaeological watching brief was maintained on groundworks associated with the construction of an extension to Beauport Park Hotel, Battle Road, Hastings. The original Beauport Park House constructed between the years c.1763 and 1766 was destroyed by fire in 1923. By 1926 the house had been rebuilt, except for the south wing. The postulated ground floor plan of the 18th century house's south wing was exposed during the fieldwork. The extant footprint / outline of this sandstone structure was indistinguishable from that shown on the 1899 and 1909 Ordnance Survey sheets. However, a number of additional architectural features were also recorded. These included a fireplace, two rainwater gullies, an associated drain and an internal partition wall. It is also suggested that the south wing of the Georgian house possessed a basement, beneath which was located a large water storage tank. The fieldwork yielded a small assemblage of late 18th – late 19th century pottery and a similarly – dated ceramic peg tile. No archaeologically significant structures, features, deposits or artefacts of pre – 18th century date were discovered. No new evidence was therefore recovered for the Romano-British and Post-medieval activity known to have taken place in the local area.

Description and Sources

Description

English Heritage South East region carried out an archaeological watching brief at Battle Abbey Stable Yard to mitigate damage to in situ archaeological features during the construction of a new arts centre. The archaeological works further examined features and stratigraphy recorded during evaluation work on the area in May 2000, in particular an ashlar reventment wall which runs north/south across the site. The work has, in addition, revealed a sequence of inter-cutting but unrelated pit features at the northern end of the area pre-dating a terracing wall.

Description and Sources

Description

Excavations were carried out by English Heritage between 1990 and 1994. These were never written up but were summarised by Rob Harris in the Extensive Urban Survey report for Battle. A passageway revealed the foundations of the Norman Gatehouse. The Almonry Gate to the east of the courthouse was also revealed. A Norman precinct wall was also uncovered. The Almonry extended south of the courthouse.

Address

Battle Abbey, Butter Cross, High Street, Battle, East Sussex, TN33 0AE

Description and Sources

Description

Harold Brakspear carried out an excavation between 1929 and 1935. This significantly refined existing knowledge of the ground-plan of the abbey, including the Norman chancel, chapter house, Refectory, kitchen, north transept, parlour and South wall of guesthouse undercroft. He also re-excavated the 13th century crypt. Details of the excavations were reported in Sussex Notes and Queries following a report in the Times Newspaper.

Address

Battle Abbey, Butter Cross, High Street, Battle, East Sussex, TN33 0AE

Description and Sources

Description

A programme of excavations were undertaken following the acquisition of the site by the government in 1976. The work was concentrated on the eastern range of the conventual buildings, particularly around the chapter house and parlour, the agenda was to assess the nature of the surviving archaeology as well as to reveal a number of the buildings identified by Brakspear for display. This work was undertaken between 1978-80, with smaller additional excavations until 1984. Its published results form the basis for much of our present understanding of the site.

Description and Sources

Description

in October 1924, Blackman again went to Beauport Park with Mr Grinstead, and a photograph in Wealden Iron 8 shows them doing some light digging at the upper (south?) end of the gully. Blackman's manuscript notebooks, entitled Notes on Sussex Iron-works, vol ii (now in the library of the Sussex Archaeological Society in Lewes), give a detailed account of the layers present beneath the surface, but unfortunately do not contain a description of the site as a whole. Although he is said to have intended to make further visits, there is no record of these in his notes.

Address

North facing slope , Beech Estate , Battle

Description and Sources

Description

Metal Detecting Survey carried out over four days and involving some 10 – 12 detector users per day. Survey revealed a higher than average use of this field in the Georgian period with numerous finds from this era, inclusive of dateable coinage, horse furniture, children's toys, buckles and buttons. The number of finds was phenomenal and evidences a high than normal usage of this field, possibly as a recreational area.

Address

Beech Estate , Battle

Description and Sources

Description

Metal detecting survey over Easterly slope revealed an abundance of musket balls of identical 18mm caliber confined to slope area (153 recovered) – resultant survey revealed shot could only have been discharged from opposite hilltop and denotes a small firing range. Musket ball caliber tends to denote military presence and the use of the Land Pattern Musket (Brown Bess) The very few buttons found on opposite hilltop suggest limited use of the range but gave no clue as to regiment using the hill.

Description and Sources

Description

A watching brief was carried out during the installation of a pipeline for a new diesel tank in November 2007. All the excavations were in previously worked ground and no archaeological features or artefacts were observed.
